

Room Key

Annotations

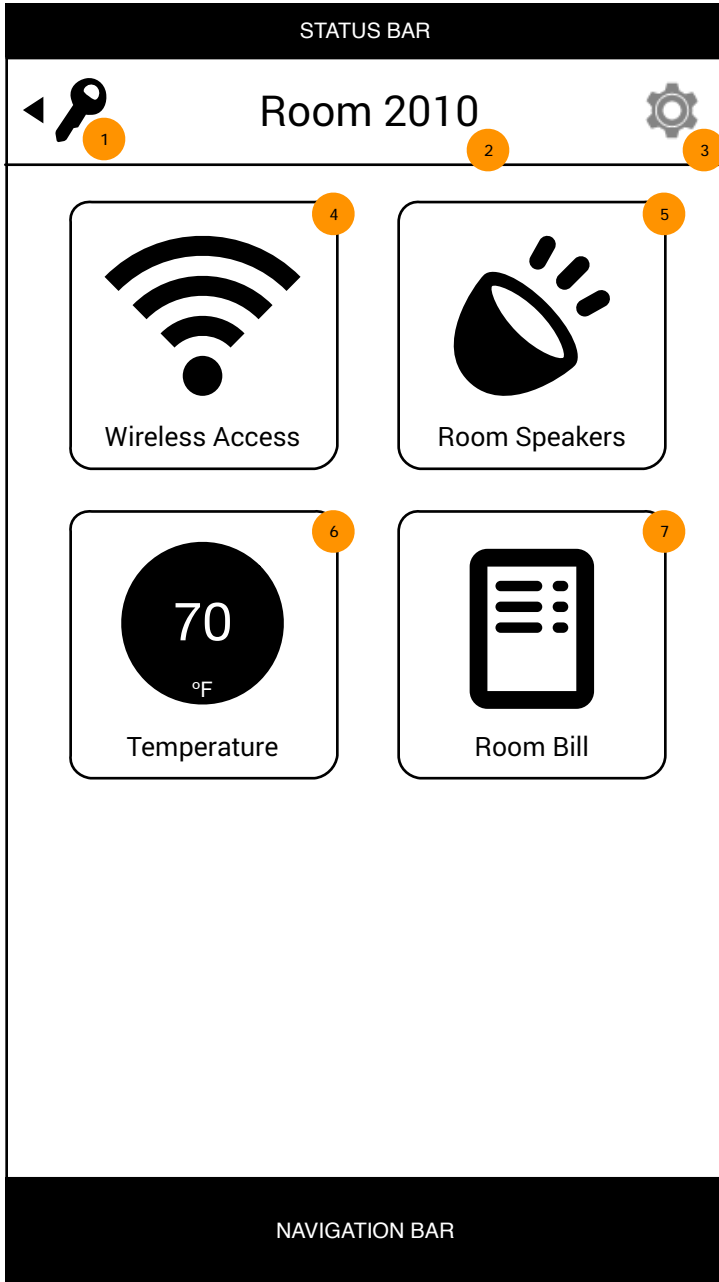

1. Hotel Logo - Tapping on the logo takes the user back to the main hotel screen.
2. Room Options button - slides the screen right to show the room options.
3. Room Number - available when room is assigned.
4. Settings button - accesses the guest's preferences screen.
5. Wifi button - brings up the wifi screen.

Note:

This is the default screen for the app when the user's room reservation is currently active. Otherwise, it goes to the hotel app main screen.

The assumption is that the phone app with some wireless communication (e.g. NFC) will be used to unlock one specific room.

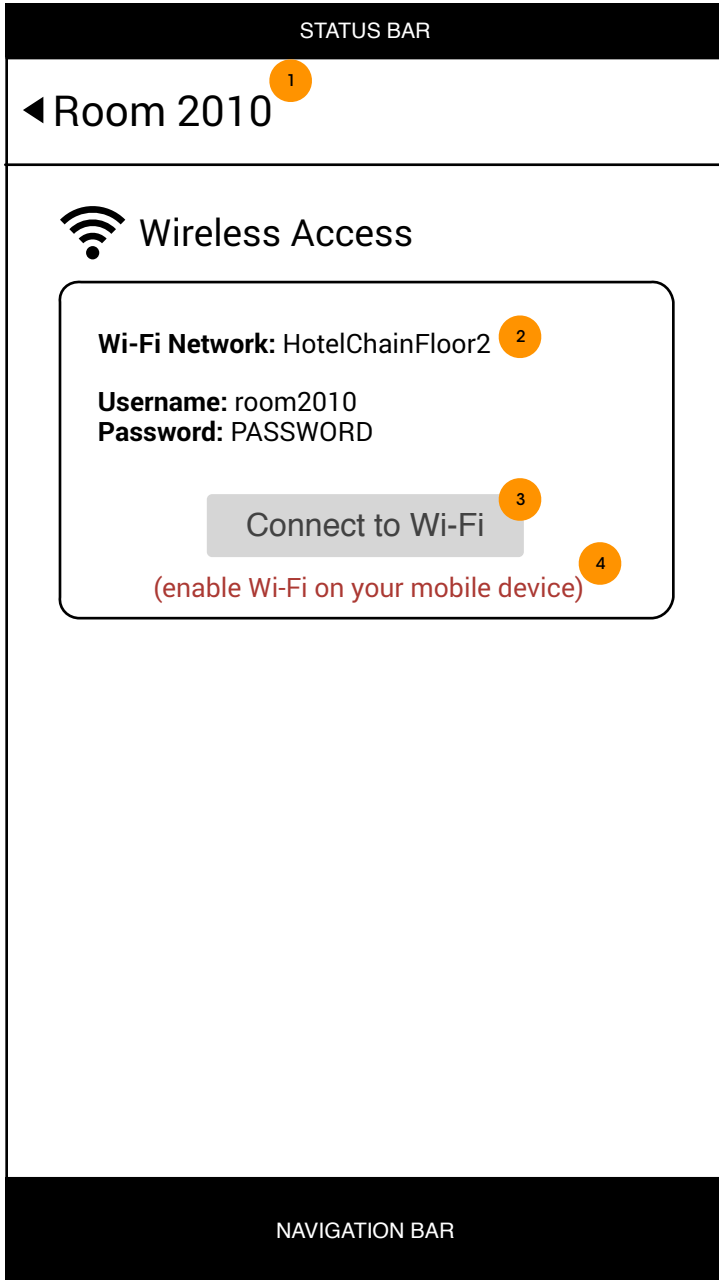

My Room

Annotations

1. Room Key button - slides the screen left to show the room key.
2. Guest's room number - available when room is assigned.
3. Settings button - accesses the guest's preferences screen.
4. Wifi button - brings up the wifi screen.
5. Speakers button - brings up the bluetooth speakers screen.
6. Temperature button - brings up the temperature control screen.
7. Room Bill button - brings up the room bill screen.

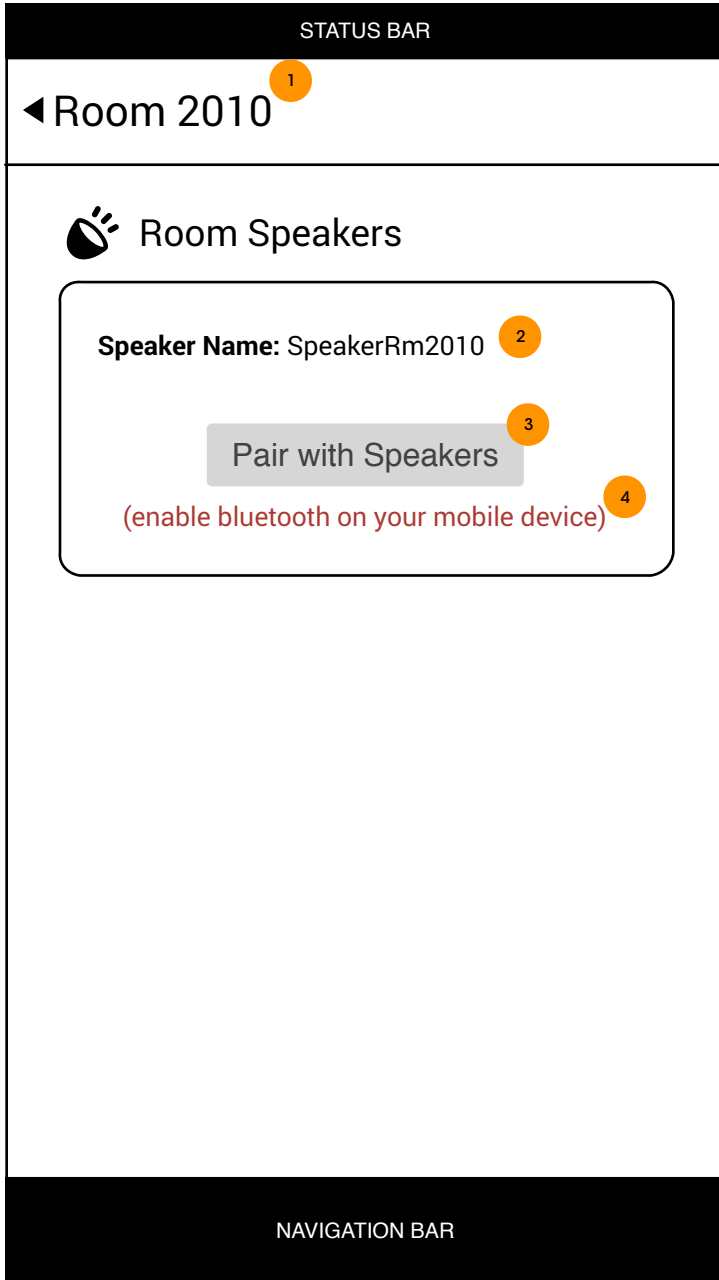

My Room - Wireless Access

Annotations

1. Back to Room - returns the user back to the My Room screen.
2. Wi-Fi info - displays wifi info for users connecting other devices such as iPad or laptop.
3. Connect button - connects the phone to the hotel wifi network.
4. Wifi Error Message - only appears when the wifi for the mobile device is disabled. The Connect button is also disabled when the phone's wifi is off.

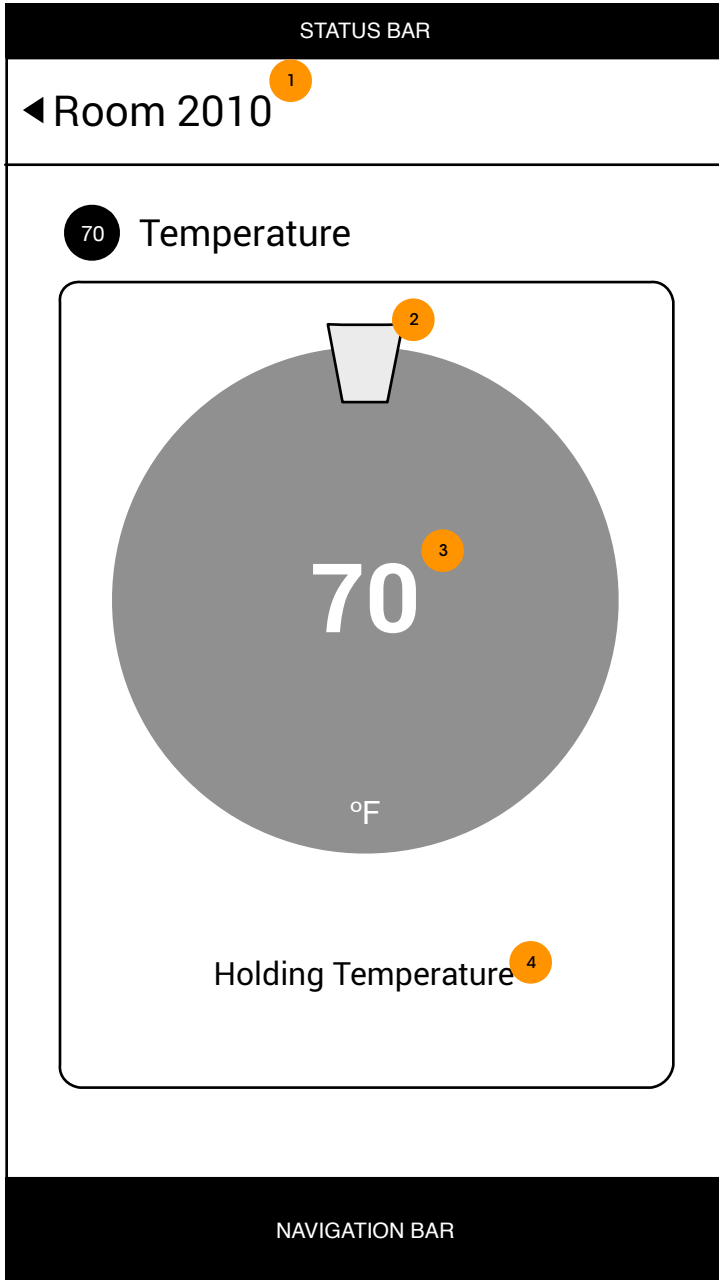

My Room - Room Speakers

Annotations

1. Back to Room - returns the user back to the My Room screen.
2. Speaker info - displays speaker info for users connecting other devices such as iPad or laptop.
3. Pair button - connects the phone to the room speaker system.
4. Bluetooth Error Message - only appears when the bluetooth for the mobile device is disabled. The Pair button is also disabled when the phone's bluetooth is off.

My Room - Temperature

Annotations

1. Back to Room - returns the user back to the My Room screen.
2. Temperature Control - swiping left sets the temperature cooler, swiping right sets the temperature warmer. The number in Temperature Setting shows the numerical value of this control.
3. Temperature Setting - shows the digital reading of the analog control from note 2.
4. A/C notification - shows if the air conditioning system is currently heating, cooling, or holding temperature.

Note:

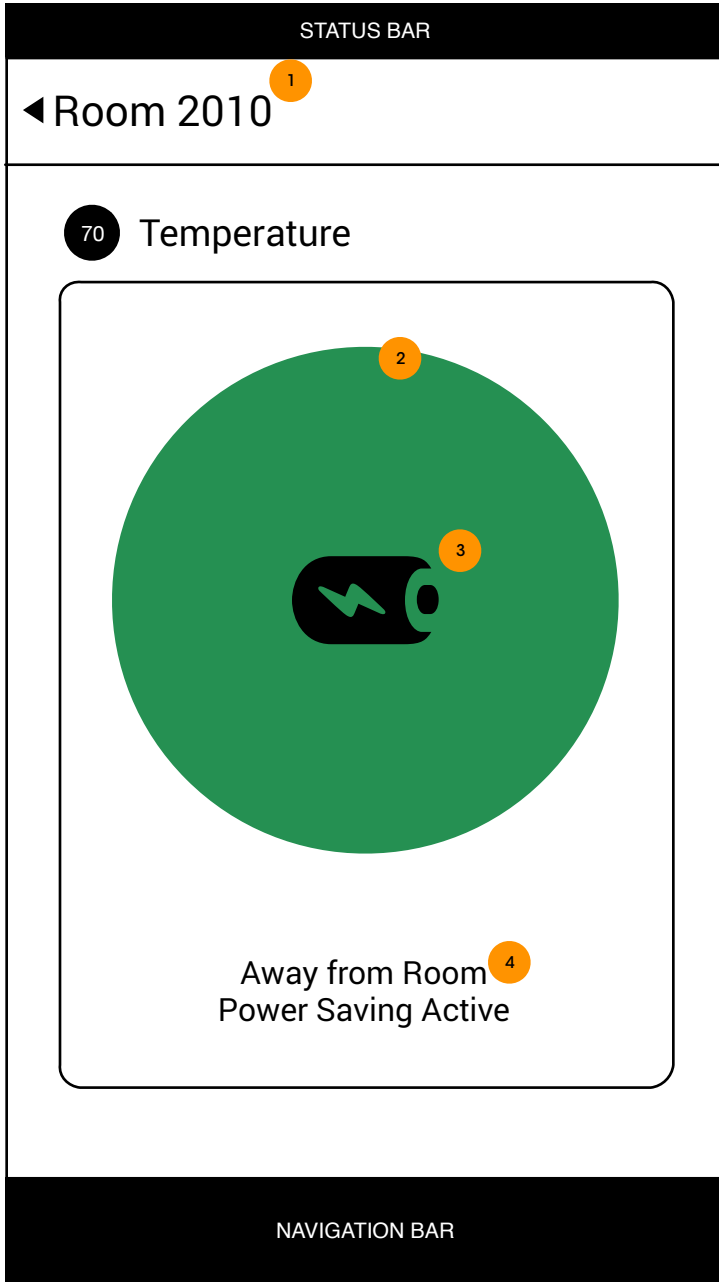

While in the room, the user action on the temperature control is immediate. Heating and cooling will engage the A/C.

The app will use the phone's location to know when the user is leaving or entering the hotel.

When the user is leaving the hotel, the A/C turns off and shows power saving. See My Room - Temperature Power Saving.

When the user is entering the hotel, the app triggers the A/C to the preferred temperature of the guest.

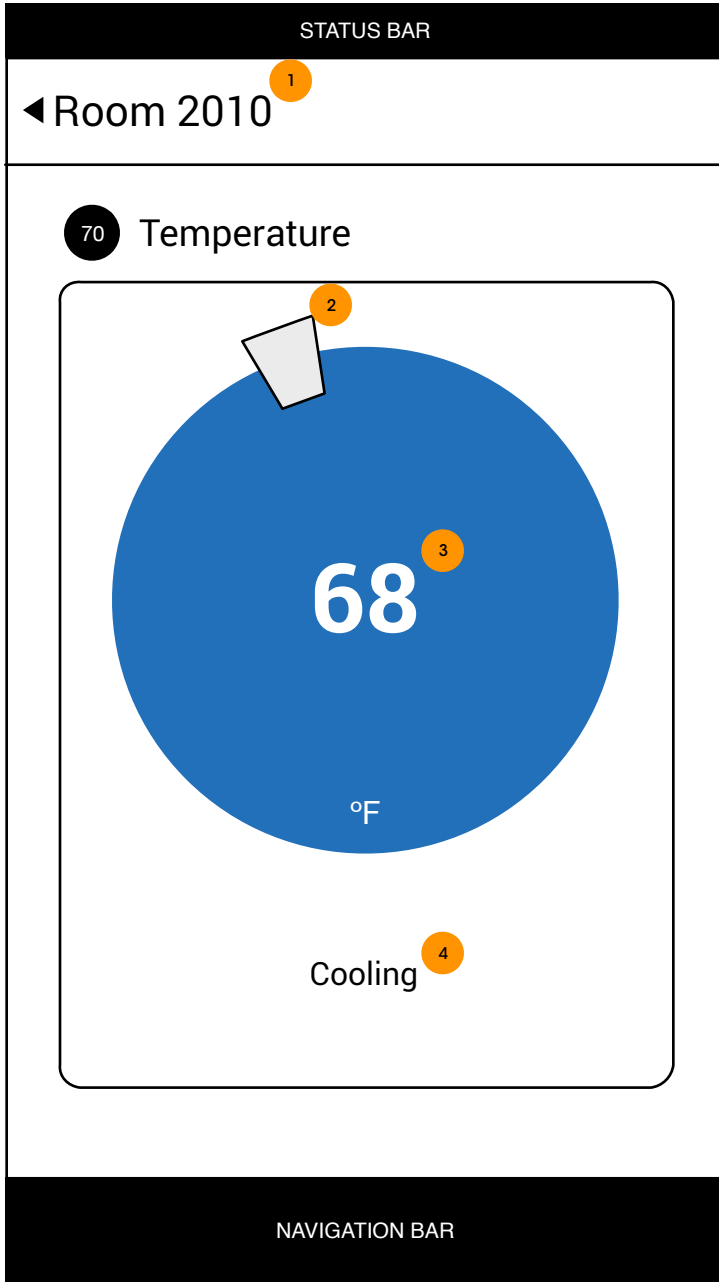

My Room - Temperature Power Saving

Annotations

1. Back to Room - returns the user back to the My Room screen.
2. Temperature Control - The control is not visible while in power-saving mode. Tapping the circle will re-enable the control and turn off power saving.
3. Power Saving Icon - shows power saving is active.
4. A/C notification - shows if the air conditioning system is off.

My Room - Temperature Cooling

Annotations

1. Back to Room - returns the user back to the My Room screen.
2. Temperature Control - showing the control set to cooling.
3. Temperature Setting - shows the digital reading of 68 degrees.
4. A/C notification - shows the system is currently cooling the room.

My Room - Room Bill
